

Configuring the first VoIP connection

Prerequisites:

- The phone and PC are connected to the router and the router is connected to the internet
- A Web browser is installed on the PC
- Any existing firewall allows the PC and the phone to communicate
- You have opened an account with a VoIP provider

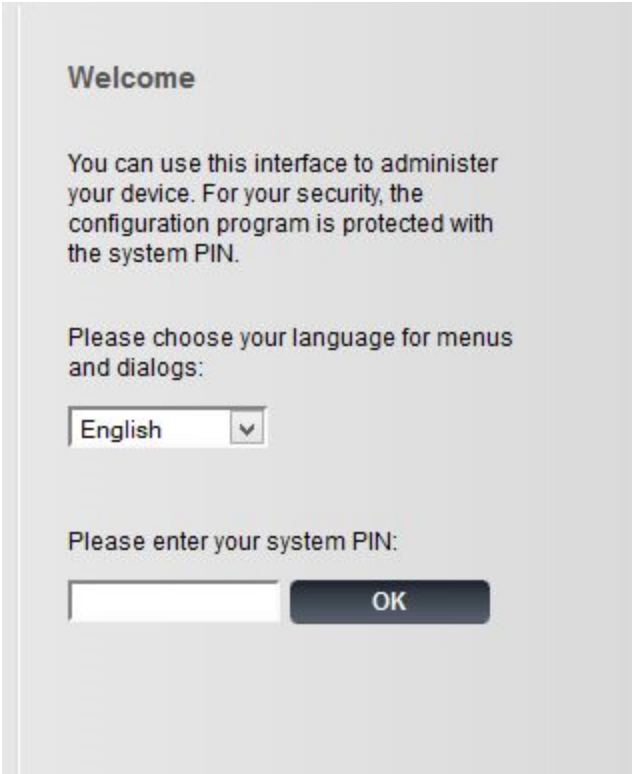

Open Web-Configurator:

- Enter the following URLs into the Web browser's address field:
<http://www.gigaset-config.com>

Oder

- Enter the telephone's current **IP address** (for example: `http://192.168.2.173`) into the address field of the Web browser.

Configuring the first VoIP connection

Welcome

You can use this interface to administer your device. For your security, the configuration program is protected with the system PIN.

Please choose your language for menus and dialogs:

English ▼

Please enter your system PIN:

Once you have successfully established the connection, the browser displays the **<Welcome>** Web configurator page.

- In the top field, select a different language if required.
- Enter your phone`s four-digit-system PIN in the bottom field. The default is '0000'.
- Click on **<OK>**
- If a security instruction is displayed: click on **<OK> again.**

2. IP2	Other Provider	Not configured	<input type="checkbox"/>
3. IP3	Other Provider	Not configured	<input type="checkbox"/>
4. IP4	Other Provider	Not configured	<input type="checkbox"/>
5. IP5	Other Provider	Not configured	<input type="checkbox"/>
6. IP6	Other Provider	Not configured	<input type="checkbox"/>

Provider or PBX profile

A profile contains all relevant settings for your provider or phone system (PBX).

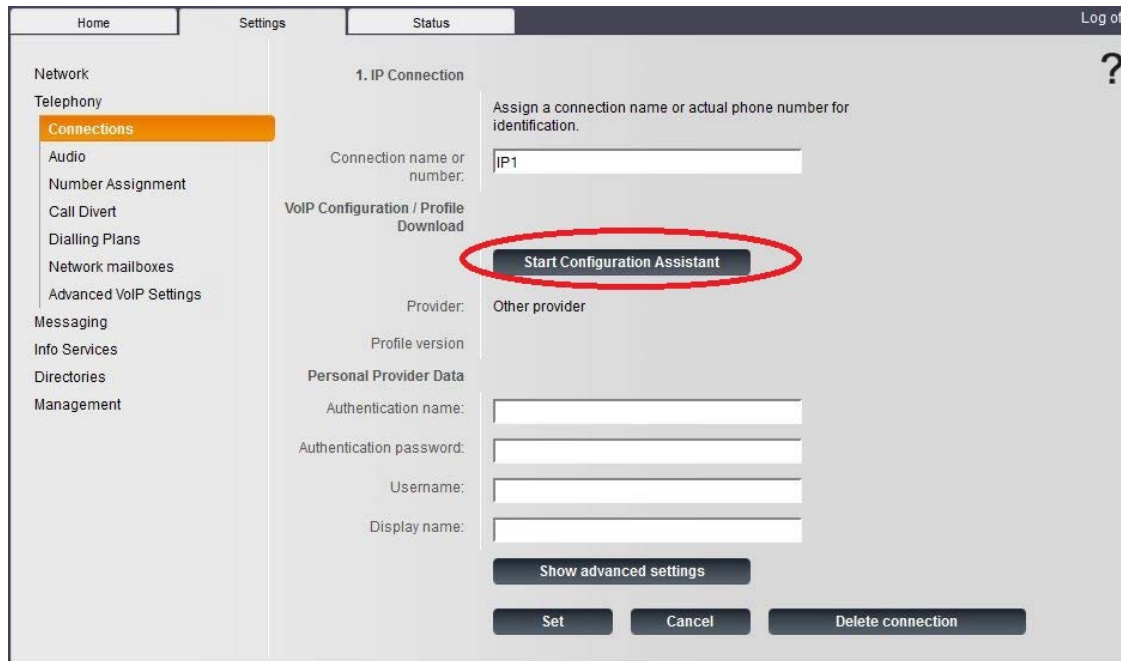

Automatic check for profile updates: Yes No

- Click on **<Settings>**
- Click on **<Telephony>** in the navigation tree(left) for the following Web page.

The **<Connections>** Web page opens with all your phone's existing connections and all those that can still be configured.

- Click on the **<Edit>** button linked to IP connection **<IP1>**

Configuring the first VoIP connection

The screenshot shows the Gigaset web interface for configuring a VoIP connection. The interface is divided into a left sidebar and a main content area. The sidebar contains a navigation menu with categories like Network, Telephony, and Messaging. The main content area is titled '1. IP Connection' and contains several sections: 'Assign a connection name or actual phone number for identification.' with a text input field containing 'IP1'; 'VoIP Configuration / Profile Download' with a 'Start Configuration Assistant' button circled in red; 'Provider:' with the value 'Other provider'; 'Profile version'; and 'Personal Provider Data' with input fields for 'Authentication name:', 'Authentication password:', 'Username:', and 'Display name:'. At the bottom of the main content area, there are three buttons: 'Show advanced settings', 'Set', and 'Cancel', and a 'Delete connection' button.

➤ Click on <Start Configuration Assistant>

Configuring the first VoIP connection

VoIP Configuration Assistant

Configure your VoIP connection with the assistant. Either by using a configuration code, which you receive from your provider, or by selecting your VoIP provider and entering your registration data.

When you select the provider, the required configuration data (general provider data, ports, codecs) will be loaded.

The configuration via provider selection is carried out in three steps:

- Please choose your country or your PBX provider (selectable only if more than 1 country is available).
- Please choose your VoIP provider or your PBX profile.
- Enter your personal provider data.

You can then enter your mailbox number and assign the new connection to a handset.

Auto Configuration Code available: Yes No

To continue, click Next.

Next > Cancel

- Choose the option **<No>** and click **<Next>** to continue

Configuring the first VoIP connection

Profile Download

Please choose the country of your provider or your PBX provider.

Country: Germany

< Back Next > Cancel

- From the list, select the **country** for which the list of VoIP providers is to be loaded
- Click on **<Next>**
