New functions in talk&surf 6.0

Version 6.0 of talk&surf offers a wide range of new functions that support the use of leading-edge telecommunications technology.

Function	Description
Bluetooth	**Wireless data transmission** Bluetooth permits wireless transmission of voice and multimedia data over a range of a few meters. The range of the connection depending on the technical features of the connected device. 1 mobile telephone, 3 PCs or PDAs and 1 headset can be used at the same time on one base station. (Only available for Gigaset SX3x3isdn.)
Dialler blocker	**Protection against diallers** The dialler blocker monitors all outgoing telephone calls and fax connections that your PC sets up via the base station. The default setting permits connections to all telephone numbers. Change this setting to block all connections from the PC or to release individual service numbers (e.g. your Internet provider).
Phrase download tool	**Replaces the pre-recorded announcements** The answering machine in your base station has pre-recorded announcements (e.g. announcing the date and time) in the language of your country. These pre-recorded announcements can be changed easily. (Only available for Gigaset SX255isdn / SX353isdn)
